About Me

I am 21 years old currently studying Computer Science at Thammasat University. I am confident that my abilities and programming skills will allow me to quickly integrate and contribute effectively to the company. I am also eager to continuously learn and apply new knowledge to support the team's growth and future success.

Objective

Ambitious Computer Science student with a strong passion for Data Analysis and Data Science to AI Research and Data Engineering. I am seeking an opportunity to apply my hands-on experience with Python, SQL, machine learning, and cloud data infrastructure in a real-world environment.

Education

Thammasat University
Bachelor of Computer Science, Faculty of Science and Technology
2023 – Present

Related Coursework: Data Analytics, Data Science, Data Engineer

Skills

Programming Languages: C, C++, Python, HTML, CSS, Javascript, Java, SQL

Software: Node.js, ReactJS

Data Science: Pandas, NumPy, Scikit-learn, TensorFlow, PyTorch

Tools: Git, Docker, Terraform, PostgreSQL

Services: AWS, Azure, Firebase, Github Actions

Language Skills:

- Thai – Native
- English – Limited working proficiency
- Japanese – Elementary / JLPT N5 Preparation

Experience

Lost & Found System – Thammasat University

- Designed NoSQL data schema on DynamoDB to store and query lost/found item reports
- Used AWS Lambda + API Gateway for serverless data pipeline handling LINE webhooks
- Stored image assets and case data on S3 hands-on experience with cloud data storage

Activities & Learning

Book Review Sentiment Analysis – Python, TensorFlow, NLP

- Built an LSTM model to classify Amazon Kindle book reviews as Positive / Negative
- Performed Data Cleaning: lowercasing, punctuation/number removal, stopwords filtering
- Converted 1–5 star ratings into binary labels and compared LSTM against baseline models
- Visualized model performance with accuracy/loss graphs – key NLP & Data Analysis project

Search Algorithms Comparison: BFS vs A* – Python

- Implemented and benchmarked BFS and A* pathfinding algorithms on maze environments
- Collected and analyzed performance data (time, path length, nodes explored) for comparison
- Applied data-driven evaluation to algorithm selection core Data Analysis methodology
